

### New Website

Measurement Systems are launching a new Website in January. This offers many new facilities for our customers including expanded product information, expanded support area AND the ability to buy Online.

Please keep checking back on the site, as many more products will be added in the near future.

### DataWeb

Now with new pricing and extra memory as standard. The additional memory enables up to 1 million records per logger to be stored, with both loggers now saving to non-volatile memory.

### ICP I-7000

The Datascan Solo Range is being re-launched as the I-7000 range which will be available in our online shop with new even more competitive pricing and new products available soon.

**I-7513 Isolated RS485 Hub unit** now available – From a single RS485 Input, this unit provides 3 independent RS485 output channels. Each of these channels will transmit data over 1.2km and include a repeater function to connect to further hub or repeater units to extend the network distance. These units are ideal for simplifying and creating some redundancy in your RS485 Networks.

### Orchestrator

#### Orchestrator - New cut down versions

We have recently introduced 4 additional products to our range of Orchestrator SCADA software. Orchestrator 500 Server fits neatly between our Orchestrator 256 and Unlimited, ensuring that Orchestrator is highly competitive for all sizes of requirements. Orchestrator 8 Server is a first step and is ideal for simple systems only requiring 8 I/O Channels and a single log file.

Supplementary to this, Internet Server for Orchestrator 500 & 8 have also been added, allowing unlimited users to view Orchestrator Displays via Internet Explorer.

#### New Version 3.2 Coming Soon

Version 3.2 will soon be available for new customers and current users with valid maintenance contracts. Some of the many enhancements include:

- Support for Windows Vista
- SQL Server + Visual Studio 2005 support
- Windows XP look and feel
- Export Image from Trends
- Logo on Trends
- New drivers available – CAN Bus, WITS Input/ Output, Climet Particle Counter
- Alarm Acknowledgement comments

If you would like to take advantage of the facilities available within v3.2, then please contact us to discuss an Orchestrator Maintenance Contract. Please note that from Orchestrator Version v3.2, there is a small change to the licencing as it will now also be version based and additional drivers will also be licenced (1 driver supplied free of charge with each Server licence).

### On-Site Datascan Calibration

We are sure all customers will agree about the high level of reliability and stability of our Datascan Units. However over time the calibration will fall out of specification. We recommend returning the units at regular intervals (ideally annually) for re-calibration. For customers who cannot send the units back individually due to time or cost constraints, we now offer an On-Site Calibration Service. For more information on this please contact us.
